PROFILE

Full-stack software engineer building production inventory, order and pricing systems for e-commerce clients at Algoclan. Final-year CSE student at CUET; 1st place at the Mysoftheaven × CUET AI Hackathon, and top 10 in 3+ national hackathons. I like turning messy real-world workflows into reliable software.

EXPERIENCE

Software Engineer, Algoclan *Oct 2025 – Present*

Node.js, Express, Next.js, FastAPI, MongoDB, Docker

- Core contributor (250+ commits across backend and frontend) to a multi-tenant inventory and listing platform for an e-commerce reseller, integrated with two major resale-marketplace APIs.
- Built the RFID/barcode scanning workflow end to end: batch scanning, EPC-to-UPC conversion, reviewable scan drafts, fallback lookups and retries for unknown items, and commit-to-inventory.
- Built stock reconciliation against physical warehouse counts and applied ~19,400 reconciled inventory rows to production, with rollback files prepared in advance.
- Automated order ingestion and cross-marketplace delisting to prevent overselling; added multi-client onboarding and per-client attribution.
- Implemented four pricing strategies (competitive index, demand momentum, seasonality, market momentum) in a FastAPI repricing service, with scheduled bid/ask time-series collection and AI-generated price notifications.
- Added audit logging, rate limiting, API-key auth, Swagger docs and an AI weekly-analysis chatbot; Dockerized and set up CI/CD for another product's backend.

AI R&D Industrial Trainee (Team Lead), Mysoftheaven (BD) Ltd. *Sep 2026*

- Led a 3-person team building an AI Security Gateway against LLM prompt injection and data leakage (OWASP LLM01/02): leakage-safe pipeline over 26k records, layered regex/ML/DeBERTa detection, and an audit replacing an inflated 100% detection claim with honest held-out metrics.

PERSONAL PROJECTS

LTSR: Learning Through Spaced Repetition *React, Django REST, Celery*

- Study app with SM-2 spaced-repetition flashcards, topic notes and recurring tasks; Celery jobs send email reminders, with JWT auth and Chart.js progress charts.

Automed: AI-Powered Healthcare Platform *Next.js, Express, MongoDB*

- Live patient–doctor platform with multi-chamber scheduling, digital prescriptions matched to Bangladeshi drug brands, prescription OCR and AI patient summaries; patient-approved record access and audit logs of every record view.

ModelMate: AI Community Platform *Django, PostgreSQL*

- Community web app where AI users share knowledge and discuss models, with authentication and a REST API.

PUBLICATION

Momentum: An E-Court Service and Lawyer Help Assistant Mobile Application

Presented at 16th ICCCNT 2025, IIT Indore (with IEEE EPS & AICTE) · Jul 2025

SKILLS

Languages: JavaScript, Python, Java, C++, C# (coursework)

Backend: Node.js, Express, FastAPI, Django REST Framework

Frontend: React, Next.js, Tailwind CSS, shadcn/ui

Databases: MongoDB, PostgreSQL, MySQL

AI: Vercel AI SDK, OpenAI & Gemini APIs

DevOps & Tools: Docker, CI/CD, Git, Swagger/OpenAPI, cron jobs, Celery

Fundamentals: Data Structures & Algorithms, OOP (C#), REST API design

EDUCATION

B.Sc. in Computer Science & Engineering
Chittagong University of Engineering & Technology (CUET)
Session 2021–22 · Final year

Higher Secondary Certificate
BAF Shaheen College, Dhaka
GPA 5.00 · 2021

Python (Django) Training, 80 hrs
EDGE Project, Bangladesh Computer Council, at CUET CSE
Sep – Dec 2024

ACHIEVEMENTS

- 1st Place, AI Hackathon by Mysoftheaven (BD) Ltd. & CUET CSE (2026)
- Top 10 in 3+ national hackathons, incl. Micro-Ops, CUET CSE Fest 2025
- Judge, BUILD@CUET Hackathon by MLH & Gemini (2026)
- ~500 problems solved on Codeforces & LeetCode
- Former Secretary, BAF Shaheen College Math Club
- President's Scout Award; Shapla Cub Award
