PROFILE

Full-stack software engineer building production inventory, order and pricing systems for e-commerce clients at Algoclan, working mainly with Node.js/Express, Next.js, FastAPI and MongoDB. Final-year CSE student at CUET with top-10 finishes in 3+ national hackathons. I like taking messy real-world workflows (warehouse scanning, stock reconciliation, market pricing) and turning them into reliable software.

EXPERIENCE

Software Engineer, Algoclan *Oct 2025 – Present*

Node.js, Express, Next.js, FastAPI, MongoDB, Docker

- Core contributor (250+ commits across backend and frontend) to a multi-tenant inventory and listing platform for an e-commerce reseller, integrated with two major resale-marketplace APIs.
- Built the RFID/barcode scanning workflow end to end: batch scanning, EPC-to-UPC conversion, reviewable scan drafts, fallback lookups and retries for unknown items, and commit-to-inventory.
- Built stock reconciliation against physical warehouse counts and applied a reconciled count of ~19,400 inventory rows to production, with rollback files prepared in advance.
- Automated order ingestion and cross-marketplace delisting so sold items stop being listed elsewhere; added multi-client onboarding and per-client inventory attribution.
- Implemented four pricing strategies (competitive index, demand momentum, seasonality, market momentum) in a FastAPI repricing service, with scheduled bid/ask time-series collection and AI-generated price notifications.
- Added audit logging, rate limiting, API-key auth and Swagger/OpenAPI docs to the platform API, plus an AI chatbot that produces weekly inventory analysis with CSV export.
- Dockerized and set up CI/CD for another product's Node.js backend.

PERSONAL PROJECTS

LTSR: Learning Through Spaced Repetition *React, Django REST, Celery*

- Study app with flashcards scheduled by the SM-2 spaced-repetition algorithm, topic-organized notes and recurring tasks.
- Celery background jobs send email reminders; JWT auth and progress charts with Chart.js.

HealthTwin: AI-Powered Healthcare Platform *Next.js, Django, PostgreSQL*

- Patient–doctor platform with symptom tracking, prescription assistance and AI-generated patient insights, built around a "digital twin" of each patient's health history.

ModelMate: AI Community Platform *Django, PostgreSQL*

- Community web app where AI users share knowledge and discuss models, with authentication and a REST API.

SKILLS

Languages:
JavaScript, Python, Java, C++, C# (coursework)

Backend:
Node.js, Express, FastAPI, Django REST Framework

Frontend:
React, Next.js, Tailwind CSS, shadcn/ui

Databases:
MongoDB, PostgreSQL, MySQL

AI:
Vercel AI SDK, OpenAI & Gemini APIs

DevOps & Tools:
Docker, CI/CD, Git, Swagger/OpenAPI, cron jobs, Celery

Fundamentals:
Data Structures & Algorithms, OOP (C#), REST API design

EDUCATION

B.Sc. in Computer Science & Engineering
Chittagong University of Engineering & Technology (CUET)
Session 2021–22 · Final year

Higher Secondary Certificate
BAF Shaheen College, Dhaka
GPA 5.00 · 2021

ACHIEVEMENTS

- Top-10 finishes in 3+ national hackathons (7+ competed)
- Former Secretary, BAF Shaheen College Dhaka Math Club
- President's Scout Award
- Shapla Cub Award
